

删除排序链表中的重复元素 I

给定一个排序链表，删除所有重复的元素使得每个元素只留下一个

例如：

给定 1->1->2，返回 1->2

给定 1->1->2->3->3，返回 1->2->3

(<https://leetcode-cn.com/problems/remove-duplicates-from-sorted-list/description/>)

```
public ListNode deleteDuplicates(ListNode head) {  
    if (head == null) {  
        return null;  
    }  
    ListNode dummy = new ListNode(Integer.MIN_VALUE);  
    dummy.next = head;  
    head = dummy;  
    while (head != null) {  
        while (head.next != null && head.next.val == head.val) {  
            head.next = head.next.next;  
        }  
        head = head.next;  
    }  
    return dummy.next;  
}
```
